

# Inspirational Collaborative Primary Science Workshops

Ofsted have expressed concern that science is being squeezed out of the primary school curriculum.

The Ogden trust and University of Manchester reported 'pupils regularly experience fun activities without developing a deep understanding of the associated scientific concepts'.

- ▶ Do your staff feel confident in delivering science lessons?
- ▶ Are your pupils being given the opportunity to develop their science skills alongside their learning?
- ▶ Has your school responded to the Ofsted's Science Research review and recognised the importance of building teachers' knowledge in science?

## Can your school confidently answer yes to all the above?

If not then our new Inspirational Primary Science Workshops are available to book.

These workshops are designed to:-

- ▶ Support teachers in delivering successful whole class practicals directly linked to the National Curriculum
- ▶ Inspire and enthuse pupils into science and address any misconceptions they may have

***We provide the science expertise and the practical equipment***

***We deliver the workshop to the pupils collaboratively with teachers***

***We train the teachers how to deliver the science workshops for future years***

## WE OFFER

Half day practical workshops in:

- ▶ Rocks
- ▶ Forces and magnets
- ▶ Electricity
- ▶ Sound
- ▶ Light

Whole School Science assemblies are a good way to launch the science day so that all pupils can experience science! Schools can pick and choose from the workshops available, and we provide discounts if 2 workshops are delivered on one day.
